... the leader in processing technology

Many of our clients will know, that our Company have been manufacturing quality Film Processors & related products for over 60 years. We have just acquired a new purpose built factory which is just 1 mile from our last location. Both factories are fully operational at the moment but it is planned that all manufacturing, sales & service will move to the new factory during the summer.

This latest newsletter also comes at a time when many motion picture laboratories are finding that their margins are being squeezed. New Technologies, increased costs, in terms of labour and materials reduced print runs and shortened delivery times all add to the day to day pressure of laboratory managers worldwide.

With Photomec's close association with many major film labs and increased enquiries for engineering assistance to our customers like our polisher below, we have formed within our Company a special division to take care of these special items without them interfering with the production of our standard build equipment.

We are now able to undertake the part or full refurbishment of customer's equipment, re-site machines, or fit the latest equipment for machine control or temperature monitoring. Automate chemical mixing or replenishment control, design and or project manage a part or complete laboratory. If you have a need, but not the resources then contact us, we will deal with your enquiry and complete any work undertaken professionally and on time.
